Subject: Microsft Settlement

Innovation comes from a free market place not one that's run by government. If you force crippling sanctions on Microsoft you will go back to the stone age. Ninety percent of the computers use Microsoft product for a reason. They are affordable on any persons budget consumer friendly, great flexibility. It allows even a seventy year old blue collar worker like myself without great effort to operate it. This settlement on the table is a plus for the consumer. Don't let the states or rivals greed for money stop this.
